GENERAL PRODUCT FEATURE DEFINITIONS: * Please review policy-specific features, definitions and limitations, applicable for the State of issue. *****

Accelerated Death Benefit: A rider providing for an advance payment of part or all of the policy Death Benefit to the insured prior to death. Examples include: Terminal illness; Convalescent Care, Nursing home confinement [see provisions in specific policy].

Accidental Death Benefit: An optional provision that provides for an additional payment for loss of life due to an accident not directly attributable to actions of the insured that was the direct cause of death.

Additional Insured: An optional policy supplement attached to the insurance policy insuring other members of the family, generally the spouse and children.

Age: The age in years of an applicant, insured, or beneficiary. Some companies use the age at the last birthday. Other companies use the age at the nearest birthday (last or next).

Children's Level Term: An optional policy supplement attached to the insurance policy insuring the minor children of the insured.

Continuation of Premium: Generally applicable to universal life, whole life, variable life and other permanent-type policies. Premium payments may be skipped as long as there is enough net surrender value to cover the policy's cost expenses and deductions, which continue to be required throughout the term of the policy. Depending on the actual results, the premium payer may need to continue or resume premium outlays.

Conversion: One type of life insurance contract can be exchanged for a different type assuming the contract is "convertible". For instance, term insurance can be converted to universal life or some other form of permanent insurance.

"Conversion attained age" means the premiums for the converted policy are based on the insured's age attained at time of conversion.

"Convertible" is a provision giving the policyholder the right to exchange the policy for another without evidence of insurability and/or medical exam.

Coverage Protection / Guaranteed Death Benefit: The amount stated in the policy as payable upon the death of the insured.

Guaranteed Level Premium / Level Premium: A life insurance premium that remains fixed through the life of the policy.

Guaranteed Purchase Option / Guaranteed Insurability Rider: A rider that gives the policyholder the right to purchase additional insurance at specified future times without evidence of insurability.

Rates are generally based on attained age at the time of the additional purchase.

Return of Premium: A rider that will pay an amount equal to the sum of all premiums paid to date [see specific conditions of the respective policy].

Waiver of Premium / Disability Premium Waiver: If an insured becomes totally disabled (generally for 6-months or longer), no further premiums will be due and the policy will be continued in full force until death or recovery occurs.

Upon recovery, the policyholder does not have to repay premium payments made by the insurer on behalf of the policyholder during the disability period.
